*Court of Appeal Case(s): B036068 In the Japanese language the word 'ie' denotes both the materiality of homes and family relations within. The traditional family and family house - often portrayed in ideal terms as key foundations of Japanese culture and society - have been subject to significant changes in recent years. This book comprehensively addresses various aspects of family life and dwelling spaces, exploring how homes, household patterns and kin relations are reacting to contemporary social, economic and urban transformations, and the degree to which traditional patterns of both houses and households are changing. The book contextualises the shift from the hegemonic post-war image of standard family life, to the nuclear family and to a situation now where Japanese homes are more likely to include unmarried singles; childless couples; divorcees; unmarried adult children and elderly relatives either living alone or in nursing homes. It discusses how these new patterns are both reinforcing and challenging typical understandings of Japanese family life. Hal Foster, author of the acclaimed *Design and Crime*, argues that a fusion of architecture and art is a defining feature of contemporary culture. He identifies a "global style" of architecture—as practiced by Norman Foster, Richard Rogers and Renzo Piano—analogue to the international style of Le Corbusier, Gropius and Mies. More than any art, today's global style conveys both the dreams and delusions of modernity. Foster demonstrates that a study of the "art-architecture complex" provides invaluable insight into broader social and economic trajectories in urgent need of analysis. Biannually since 1994, the European Conference on Product and Process Modelling in the Building and Construction Industry has provided a review of research, given valuable future work outlooks, and provided a communication platform for future co-operative research and development at both European and global levels. This volume, of special interest to Log Home Living is the oldest, largest and most widely distributed and read publication reaching log home enthusiasts. For 21 years Log Home*

Living has presented the log home lifestyle through striking editorial, photographic features and informative resources. For more than two decades Log Home Living has offered so much more than a magazine through additional resources—shows, seminars, mail-order bookstore, Web site, and membership organization. That's why the most serious log home buyers choose Log Home Living. "The professional architectural monthly" (varies). During the past twenty years, a broad spectrum of theories and methods have been developed in physics, chemistry and molecular biology to explain structure formation in complex systems. These methods have been applied to many different fields such as economics, sociology and town planning, and this book reflects the interdisciplinary nature of complexity and self-organisation. The main focus is on the emergence of collective phenomena from individual or microscopic interactions. Presents a wide-ranging overview from fundamental aspects of the evolution of complexity, to applications in biology, ecology, sociology, economics, and urban structure formation. The Laboring of Communication examines the transformation of work and of worker organizations in today's Information Society. The book focuses on how traditional trade unions and new worker associations growing out of social movements are coming together to address the crisis of organized labor. It concentrates on the creative responses of the technical and cultural workers in the mass media, telecommunications, and information technology industries. Concentrating on political economy, labor process, and feminist theory, it proceeds to offer several ways of thinking about communication workers and the nature of the society in which they work. Drawing on interviews and the documentary record, the book offers case studies of successful and unsuccessful efforts among both traditional and alternative worker organizations in the United States and Canada. It concludes by addressing the thorny issue of outsourcing, describing how global labor federations and nascent worker organizations in the developing world are coming together to develop creative solutions. Wasn't That a Mighty Day: African American Blues and Gospel Songs on Disaster takes a comprehensive look at sacred and secular disaster songs, shining a spotlight on their historical and cultural importance. Featuring newly transcribed lyrics, the book offers sustained attention to how both Black and white communities responded to many of the tragic events that occurred before the mid-1950s. Through detailed textual analysis, Luigi Monge explores songs on natural disasters (hurricanes, floods, tornadoes, and earthquakes); accidental disasters (sinkings, fires, train wrecks, explosions, and air disasters); and infestations, epidemics, and diseases (the boll weevil, the jake leg, and influenza). Analyzed songs cover some of the most well-known disasters of the time period from the sinking of the Titanic and the 1930 drought to the Hindenburg accident, and more. Thirty previously unreleased African American disaster songs appear in this volume for the first time, revealing their pertinence to the relevant disasters. By comparing the song lyrics to critical moments in history, Monge is able to explore how deeply and directly these catastrophes affected Black communities; how African Americans in general, and blues and gospel singers in particular, faced and reacted to disaster; whether these collective tragedies prompted different reactions among white people and, if so, why; and more broadly, how the role of memory in recounting and commenting on historical and cultural facts shaped African American society from 1879 to 1955. This volume is dedicated to exploring the crossroads where complex sentences and information management – more specifically information structure and reference tracking – come together. Complex sentences are a highly relevant but understudied domain for studying notions of IS and RT. On the one hand, a complex sentence can be studied as a mini-unit of discourse consisting of two or more elements describing events, situations, or processes, with its own internal information-structural and referential organization. On the other hand, complex sentences can be studied as parts of larger discourse structures, such as narratives or conversations, in terms of how their information-structural characteristics relate to this wider context. The book offers new perspectives for the study of the interaction between complex sentences and

information management, and moreover adds typological breadth by focusing on lesser studied languages from several parts of the world. Porous and Complex Flow Structures in Modern Technologies represents a new approach to the field, considering the fundamentals of porous media in terms of the key roles played by these materials in modern technology. Intended as a text for advanced undergraduates and as a reference for practicing engineers, the book uses the physics of flows in porous materials to tie together a wide variety of important issues from such fields as biomedical engineering, energy conversion, civil engineering, electronics, chemical engineering, and environmental engineering. Thus, for example, flows of water and oil through porous ground play a central role in energy exploration and recovery (oil wells, geothermal fluids), energy conversion (effluents from refineries and power plants), and environmental engineering (leachates from waste repositories). Similarly, the demands of miniaturization in electronics and in biomedical applications are driving research into the flow of heat and fluids through small-scale porous media (heat exchangers, filters, gas exchangers). Filters, catalytic converters, the drying of stored grains, and a myriad of other applications involve flows through porous media. By providing a unified theoretical framework that includes not only the traditional homogeneous and isotropic media but also models in which the assumptions of representative elemental volumes or global thermal equilibrium fail, the book provides practicing engineers the tools they need to analyze complex situations that arise in practice. This volume includes examples, solved problems and an extensive glossary of symbols. This volume contains articles written by the invited speakers and workshop participants from the conference on 'Crystallographic Groups and Their Generalizations', held at Katholieke Universiteit Leuven, Kortrijk (Belgium). Presented are recent developments and open problems. Topics include the theory of affine structures and polynomial structures, affine Schottky groups and crooked tilings, theory and problems on the geometry of finitely generated solvable groups, flat Lorentz 3-manifolds and Fuchsian groups, filiform Lie algebras, hyperbolic automorphisms and Anosov diffeomorphisms on infra-nilmanifolds, localization theory of virtually nilpotent groups and aspherical spaces, projective varieties, and results on affine apartment systems. Participants delivered high-level research mathematics and a discussion was held forum for new researchers. The survey results and original papers contained in this volume offer a comprehensive view of current developments in the field. Many approaches to creating Software Product Lines have emerged that are based on Model-Driven Engineering. This book introduces both Software Product Lines and Model-Driven Engineering, which have separate success stories in industry, and focuses on the practical combination of them. It describes the challenges and benefits of merging these two software development trends and provides the reader with a novel approach and practical mechanisms to improve software development productivity. The book is aimed at engineers and students who wish to understand and apply software product lines and model-driven engineering in their activities today. The concepts and methods are illustrated with two product line examples: the classic smart-home systems and a collection manager information system. The first Bayesian Young Statisticians Meeting, BAYSM 2013, has provided a unique opportunity for young researchers, M.S. students, Ph.D. students, and post-docs dealing with Bayesian statistics to connect with the Bayesian community at large, exchange ideas, and network with scholars working in their field. The Workshop, which took place June 5th and 6th 2013 at CNR-IMATI, Milan, has promoted further research in all the fields where Bayesian statistics may be employed under the guidance of renowned plenary lecturers and senior discussants. A selection of the contributions to the meeting and the summary of one of the plenary lectures compose this volume. Prepared in cooperation with the Development Council of the State of Rhode Island. Contributed articles. Late Iron Age and Early Roman Britain has often been homogenised by models that focus on the resistance/assimilation dichotomy during the period of transition. Complex Assemblages examines the rural settlements of this

period through the lens of Cultural Theory in order to tease out the more nuanced and diverse human landscape that the material suggests. This approach develops new ways of thinking about the variability observed in rural settlements from the end of the Middle Iron Age (MIA) to the early 2nd century AD; the selected study area is the Upper and Middle Thames Valley. This book uses the grid/group designations of Mary Douglas' Cultural Theory as a tool to produce a more multifaceted picture of the period, exploring the assemblages of these rural settlements to understand the nature of the socio-political structures of the region, beyond the anonymity of tribal affiliation and the faceless economic dichotomy of high and low status.

REDEFINE YOUR RELATIONSHIP WITH FOOD -- AND REACH YOUR IDEAL WEIGHT! Obesity expert Dr. Gerard Musante and his residential weight loss center, Structure House, have helped more than thirty thousand people lose weight. A stay at Structure House costs thousands of dollars. Now Dr. Musante's innovative ideas and effective treatment methods are yours for the price of this book. **IT'S NOT FOOD THAT MAKES YOU FAT -- IT'S YOUR EATING BEHAVIOR.** During his thirty years of practice, Dr. Musante has shown that it is your relationship with food that determines your ability to reach your ideal weight. His system targets behaviors resulting from habit, boredom, or stress that lead to unstructured eating -- eating for nonnutritional reasons -- and presents concrete methods for designing new, structured eating patterns. You'll learn to isolate your unhealthy eating, recognize and neutralize the food triggers that cause your unstructured eating, and stop using food to satisfy needs other than hunger. Dr. Musante's method gets to the root of these behaviors by completely reconstructing your daily experience with food and therefore the choices you make about what to eat. *The Structure House Weight Loss Plan presents Dr. Musante's Structured Eating system. You will learn to eat nutritious food in appropriate portions three times a day -- the food that you need to meet your nutritional requirements and to reach and maintain the level of weight you desire. The Structured Eating program is presented in three sections. The first section, "Get Structured," guides you through making the changes that will increase success, including understanding your eating behaviors that emerge from habit, boredom, and stress; learning how the organization of your refrigerator and cabinets can lead to weight loss or weight gain; and analyzing the attitudes toward food of the people who surround you at work and at home. In the second section, "Be Structured," you learn about food choices; meal planning, including grocery shopping and food preparation; and identifying the right kinds of exercise that will enhance your success. In the final section, "Stay Structured," Dr. Musante shares all the secrets of lifestyle change that will help you take and, more important, keep the weight off. The strategies are both large and small, simple and profound, immediate and long lasting. Using the Structure House approach, you'll be in control of food -- not controlled by it. You'll gain power by taking responsibility -- and then you can take credit for your successes. The design of tall buildings and complex structures involves challenging activities, including: scheme design, modelling, structural analysis and detailed design. This book provides structural designers with a systematic approach to anticipate and solve issues for tall buildings and complex structures. This book begins with a clear and rigorous exposition of theories behind designing tall buildings. After this is an explanation of basic issues encountered in the design process. This is followed by chapters concerning the design and analysis of tall building with different lateral stability systems, such as MRF, shear wall, core, outrigger, bracing, tube system, diagrid system and mega frame. The final three chapters explain the design principles and analysis methods for complex and special structures. With this book, researchers and designers will find a valuable reference on topics such as tall building systems, structure with complex geometry, Tensegrity structures, membrane structures and offshore structures. Numerous worked-through examples of existing prestigious projects around the world (such as Jeddah Tower, Shanghai Tower, and Petronas Tower etc.) are provided to assist the reader's understanding of the topics. • Provides the latest modelling methods in design such*

as BIM and Parametric Modelling technique. • Detailed explanations of widely used programs in current design practice, such as SAP2000, ETABS, ANSYS, and Rhino. • Modelling case studies for all types of tall buildings and complex structures, such as: Buttressed Core system, diagrid system, Tube system, Tensile structures and offshore structures etc. This is a step by step book that teaches your child how to write a good Narrative, Expository, and/or Persuasive essay! Most children write well but when it comes to writing it in essay format they lack the structure of the essay. This book teaches your child a simple method to use that will help them write a good essay every time. It is really as easy as T 1, 2, 3! Using the author created organizational device the kids stay focused on their topic and are able to elaborate on their main ideas using examples and details. This book was written by a teacher to help kids across America become better writers. This method works for any student in any state. There are even resources listed in the book so that parents can find what their individual state requires on their state's writing test. This method can be used with anyone at any age. If you are in technical school or college and have difficulty with organizational skills, then this book will help you. Log Home Living is the oldest, largest and most widely distributed and read publication reaching log home enthusiasts. For 21 years Log Home Living has presented the log home lifestyle through striking editorial, photographic features and informative resources. For more than two decades Log Home Living has offered so much more than a magazine through additional resources—shows, seminars, mail-order bookstore, Web site, and membership organization. That's why the most serious log home buyers choose Log Home Living. This book examines sociolinguistic, educational and psycholinguistic factors that shape the path to sign bilingualism in deaf individuals and contributes to a better understanding of the specific characteristics of a type of bilingualism that is neither territorial nor commonly the result of parent-to-child transmission. The evolution of sign bilingualism at the individual level is discussed from a developmental linguistics perspective on the basis of a longitudinal investigation of deaf learners' bilingual acquisition of German sign language (DGS) and German. The case studies included in this volume offer unique insights into bilingual deaf learners' sign language and written language productions, and the sophisticated nature of the bilingual competence they attain. Commonalities and differences between sign bilingual language development in deaf learners and language development in other language acquisition scenarios are identified on the basis of a dynamic model of change in the evolution of (learner) language, with a focus on the role of language contact in the organisation of multilingual knowledge and the scope of inter- and intra-individual variation in learner grammars. In many respects, as becomes apparent throughout the chapters of this work, sign bilingualism represents not only a challenge but also a resource. Given this cross-disciplinary perspective, the insights on bilingualism and deafness in this volume will be of interest to a wide range of researchers and professionals. This book takes a detailed look at two differing complex predicates in the South Asian language Urdu. The Urdu permissive in particular brings into focus the problem of the syntax-semantics mismatch. An examination of the syntactic properties of this complex predicate shows that it is formed by the combination of two semantic heads, but that this combination is not mirrored in the syntax in terms of any kind of syntactic or lexical incorporation. Today's architecture has failed the body with its long heritage of purity of form and aesthetic of cleanliness. A resurgence of interest in flesh, especially in art, has led to a politics of abjection, completely changing traditional aesthetics, and is now giving light to an alternative discussion about the body in architecture. This book is dedicated to a future vision of the body in architecture, questioning the contemporary relationship between our Human Flesh and the changing Architectural Flesh. Through the analysis and design of a variety of buildings and projects, Flesh is proposed as a concept that extends the meaning of skin, one of architecture's most fundamental metaphors. It seeks to challenge a common misunderstanding of skin as a flat and thin surface. In a time when a pervasive discourse about the impact of digital

technologies risks turning the architectural skin ever more disembodied, this book argues for a thick embodied flesh by exploring architectural interfaces that are truly inhabitable. Different concepts of Flesh are investigated, not only concerning the architectural and aesthetic, but also the biological aspects. The latter is materialised in form of Synthetic Neoplasms, which are proposed as new semi-living entities, rather than more commonly derived from scaled-up analogies between biological systems and larger scale architectural constructs. These 'neoplastic' creations are identified as partly designed object and partly living material, in which the line between the natural and the artificial is progressively blurred. Hybrid technologies and interdisciplinary work methodologies are thus required, and lead to a revision of our current architectural practice. A collection of classic and contemporary articles demonstrating the development of historical archaeology over the past 20 years, both in North America and throughout the world. Contains sections on recent perspectives, people and places, historic artifacts, interdisciplinary studies, landscape studies, and international historical archaeology. For use in historical archaeology classes. No index. Annotation copyrighted by Book News, Inc., Portland, OR

*In these pages, the beloved Bill Bryson gives us a fascinating history of the modern home, taking us on a room-by-room tour through his own house and using each room to explore the vast history of the domestic artifacts we take for granted. As he takes us through the history of our modern comforts, Bryson demonstrates that whatever happens in the world eventually ends up in our home, in the paint, the pipes, the pillows, and every item of furniture. Bryson has one of the liveliest, most inquisitive minds on the planet, and his sheer prose fluency makes *At Home* one of the most entertaining books ever written about private life. The syllable is a natural unit of organization in spoken language whose strongest cross-linguistic patterns are often explained in terms of a universal preference for the CV structure. Syllable patterns involving long sequences of consonants are both typologically rare and theoretically marginalized, with few approaches treating these as natural or unproblematic structures. This book is an investigation of the properties of languages with highly complex syllable patterns. The two aims are (i) to establish whether these languages share other linguistic features in common such that they constitute a distinct linguistic type, and (ii) to identify possible diachronic paths and natural mechanisms by which these patterns come about in the history of a language. These issues are investigated in a diversified sample of 100 languages, 25 of which have highly complex syllable patterns. Languages with highly complex syllable structure are characterized by a number of phonetic, phonological, and morphological features which serve to set them apart from languages with simpler syllable patterns. These include specific segmental and suprasegmental properties, a higher prevalence of vowel reduction processes with extreme outcomes, and higher average morpheme/word ratios. The results suggest that highly complex syllable structure is a linguistic type distinct from but sharing some characteristics with other proposed holistic phonological types, including stress-timed and consonantal languages. The results point to word stress and specific patterns of gestural organization as playing important roles in the diachronic development of these patterns out of simpler syllable structures. *Building the Most Complex Structure on Earth* provides readers with a basic biological education an easy and understandable introduction into a new epigenetic theory of development and evolution. This is a novel theory that describes the epigenetic mechanisms of the development and evolution of animals and explains the colossal evolution and diversification of animals from a new post-genetic perspective. Modern biology has demonstrated the existence of a common genetic toolkit in the animal kingdom, but neither the number of genes nor the evolution of new genes is responsible for the development and evolution of animals. The failure to understand how the same genetic toolkit is used to produce millions of widely different animal forms remains a perplexing conundrum in modern biology. The novel theory shows that the development and evolution of the animal kingdom are functions of epigenetic mechanisms, which are the competent*

users of the genetic toolkit. Provides a comprehensive view of the epigenetic aspects of reproduction, development, and evolution. Highly rigorous, but simple enough for readers with only a basic knowledge of biology. This book is an introduction to the theory of complex manifolds and their deformations. Deformation of the complex structure of Riemann surfaces is an idea which goes back to Riemann who, in his famous memoir on Abelian functions published in 1857, calculated the number of effective parameters on which the deformation depends. Since the publication of Riemann's memoir, questions concerning the deformation of the complex structure of Riemann surfaces have never lost their interest. The deformation of algebraic surfaces seems to have been considered first by Max Noether in 1888 (M. Noether: Anzahl der Modulen einer Classe algebraischer Fliichen, Sitz. K6niglich. Preuss. Akad. der Wiss. zu Berlin, erster Halbband, 1888, pp. 123-127). However, the deformation of higher dimensional complex manifolds had been curiously neglected for 100 years. In 1957, exactly 100 years after Riemann's memoir, Frolicher and Nijenhuis published a paper in which they studied deformation of higher dimensional complex manifolds by a differential geometric method and obtained an important result. (A. Fr6licher and A. Nijenhuis: A theorem on stability of complex structures, Proc. Nat. Acad. Sci., U.S.A., 43 (1957), 239-241). Mining of Data with Complex Structures: - Clarifies the type and nature of data with complex structure including sequences, trees and graphs - Provides a detailed background of the state-of-the-art of sequence mining, tree mining and graph mining. - Defines the essential aspects of the tree mining problem: subtree types, support definitions, constraints. - Outlines the implementation issues one needs to consider when developing tree mining algorithms (enumeration strategies, data structures, etc.) - Details the Tree Model Guided (TMG) approach for tree mining and provides the mathematical model for the worst case estimate of complexity of mining ordered induced and embedded subtrees. - Explains the mechanism of the TMG framework for mining ordered/unordered induced/embedded and distance-constrained embedded subtrees. - Provides a detailed comparison of the different tree mining approaches highlighting the characteristics and benefits of each approach. - Overviews the implications and potential applications of tree mining in general knowledge management related tasks, and uses Web, health and bioinformatics related applications as case studies. - Details the extension of the TMG framework for sequence mining - Provides an overview of the future research direction with respect to technical extensions and application areas The primary audience is 3rd year, 4th year undergraduate students, Masters and PhD students and academics. The book can be used for both teaching and research. The secondary audiences are practitioners in industry, business, commerce, government and consortiums, alliances and partnerships to learn how to introduce and efficiently make use of the techniques for mining of data with complex structures into their applications. The scope of the book is both theoretical and practical and as such it will reach a broad market both within academia and industry. In addition, its subject matter is a rapidly emerging field that is critical for efficient analysis of knowledge stored in various domains.
